

Supply Chain Thought Leaders Roundtable "Technology, Globalization, and Policy at a Crossroads"

July 28-30, 2004
Woodstock Inn, Woodstock VT

As managers and management scientists have embraced many new technologies and approaches for improving supply chain competitiveness, these same initiatives have slipped into the middle of many important corporate and public debates: Risk and supply chain complexity; supply chain efficiency and price discrimination; low cost sourcing and job migration. This year, academics from around the world will join in a two-day roundtable focused on:

- China and the global supply chain
- Supply chain complexity
- Economics and the supply chain
- Smart pricing
- Impact of information technologies in emerging economies like India
- Supply chain risk management
- Impact of technologies like RFID on supply chain planning, security, and privacy
- Public policy and supply chain

Hosted by Tuck's Center for Digital Strategies and sponsored through generous funding from the Carnegie Bosch Institute, the roundtable will explore early stage research, gaps in practice and research, and teaching innovations.

Conference Chair: M. Eric Johnson, Center for Digital Strategies, Tuck School.

Program Committee: Gerard Cachon, Wharton; Fangruo Chen, Columbia; Jan Hammond, Harvard; Hau Lee, Stanford; Ananth Raman, Harvard; Yossi Sheffi, MIT; David Simchi-Levi, MIT; Jay Swaminathan, University of North Carolina.
